

# Lecture Homework Week 06 - Tuesday Template

## Student Information

Name: Thomas Miko

NetID: tmiko001

## Student Responses

Answer the following questions, and be sure to highlight them when you turn them in on Gradescope

### Problem 1

For part (1), below answer why the program does not work when you comment out the line `BL copy_vector`:

This branch is used to copy the vector table to the start of the program at address 0. If it doesn't do this, the program won't know where to start (reset) the program.

For part (2), below answer why moving the vector table to the beginning of the `start.s` file still works after recompiling:

By setting the start in the linker script to the vector table which starts with the reset, the program now sees the reset address as the first thing in the program and starts normally.
